

I'm a Cornell Computer Science PhD student co-advised by David Shmoys and Andrea Lodi. My research focuses on developing optimization and AI methods for real-world systems, including problems in transportation and resource management. Previously, I worked with Carla Gomes to develop methods to monitor aquaculture development from satellite imagery, with Claire Kremen to scale an ecological connectivity analysis to the global level, and with Geoffrey Schiebinger on optimization methods for single-cell genomics.

EDUCATION

- 2021 - Present **Ph.D. Computer Science**, Cornell University
Research areas: Operations research, optimization, deep learning
- 2020 **B.Sc. Honours Computer Science, Mathematics Minor**,
University of British Columbia

SELECTED PROJECTS

- 05/2025 - Present **Optimization and Simulation to Improve NYC Buses**
Through a Cornell Siegel PiTech Impact fellowship, I created a simulation framework using MTA Open Data to understand what factors drive poor performance and compare interventions. I am now partnering with the MTA to use the simulation internally and design interventions.
- 05/2024 - Present **Optimization for Fisheries Planning, Cornell University**
Working with fisheries experts to model and design interventions to reduce community-level fishery income variability in Alaska using optimization and mathematical programming.
Greenstreet, L., Q. Shi, M. Grimson, F.W. Simon, S.A. Sethi, D. Shmoys, A. Lodi. Reducing Income Variability in Natural Resource Portfolios via Integer Programming. *CPAIOR*, 2025. https://doi.org/10.1007/978-3-031-95976-9_2
- 09/2022 - 05/2024 **Deep Learning for Aquaculture Mapping in the Amazon, Cornell University**
Developed deep learning models to map aquaculture development from satellite imagery. Models were used by ecologists and the Brazilian government to understand environmental impacts and development trade-offs.

- 05/2020 - 09/2021 **Trajectory Inference for Single-Cell Data, University of British Columbia**
Developed mathematical trajectory inference methods to understand spatial and temporal patterns in genomic single-cell sequencing data. Worked closely with medical researchers and biologists to demonstrate the methods in multiple biological systems.

05/2020 - 09/2021 **Trajectory Inference for Genomic Single-Cell Data, University of British Columbia cont.**

05/2019 - 08/2019 **Electric Vehicle Infrastructure Planning, Data Science for Social Good Fellowship, University of British Columbia**

Worked with planners from the City of Surrey, British Columbia to inform their electric vehicle strategy by integrating six datasets, developing an app to visualize and analyze data, and developing a charger placement model. Followed up with the city from 2020-2022 to update and integrate the model with city systems.

AWARDS

2025	Siegel PiTech PhD Impact Fellowship , Department of Computer Science, Cornell University
2022-2026	Graduate Teaching Award x5 , Department of Computer Science, Cornell University
2020	Undergraduate Summer Research Award , Natural Sciences and Engineering Research Council of Canada (NSERC)
2019	Data Science for Social Good Fellowship , UBC Data Science Institute

TECHNICAL SKILLS

4+ Years Experience: Python, Git, Linux

1-3 Years Experience: R, Julia, Matlab, Java, SQL

Libraries/Tools: Pytorch, QGIS, Postgres, Gurobi

Experience: deep learning: CNNs, GNNs, VAEs, transformers, contrastive learning; manifold learning; mathematical programming; SQL

COMMUNITY INVOLVEMENT

2024	Organizer , AI for Science Seminar
2023	Organizer , NeurIPS Computational Sustainability Workshop
2023	Mentor , BURE Undergraduate Research Program, Cornell
2023-2024	Assistant Organizer , AI for Science Program, Cornell
2020-2021	Mentor , Data Science for Social Good Program, UBC Data Science Institute
